ping ya.ru

ou can get IP settings assigned aut his capability. Otherwise, you need or the appropriate IP settings.	tomatically if your network supports to ask your network administrator
Obtain an IP address automatic	cally
Use the following IP address: —	
IP address:	100 . 70 . 6 . 13
Subnet mask:	255 . 255 . 255 . 248
Default gateway:	100 . 70 . 6 . 9
Obtain DNS server address aut Use the following DNS server a Preferred DNS server: Alternate DNS server:	
Validate settings upon exit	Advanced

FW-AMS

FW-MSK

Выбираем опцию 2 (Set interface IP address)

```
Available interfaces:
1 - LAN (vmx0 - static, track6)
2 - WAN (VMX1 - dhcp, dhcp6)
Enter the number of the interface to configure: 2
Configure IPv4 address WAN interface via DHCP? [Y/n] n
Enter the new WAN IPv4 address. Press <ENTER> for none:
> 100.70.4.18
Subnet masks are entered as bit counts (like CIDR notation).
e.g. 255.255.255.0 = 24
     255.255.0.0 = 16
     255.0.0.0
                   = 8
Enter the new WAN IPv4 subnet bit count (1 to 32):
> 28
For a WAN, enter the new WAN IPv4 upstream gateway address.
For a LAN, press <ENTER> for none:
> 100.70.4.17
```

```
Do you want to use it as the default IPv4 gateway? [Y/n] y

Do you want to use the gateway as the IPv4 name server, too? [Y/n] n

Enter the IPv4 name server or press (ENTER) for none:

> 100.100.100.100

Configure IPv6 address WAN interface via DHCP6? [Y/n] n

Enter the new WAN IPv6 address. Press (ENTER) for none:

> Restore web GUI access defaults? [y/N] y
```

Получаем

```
*** OPNsense.localdomain: OPNsense 23.1 ***
 LAN (VMX0)
                 -> v4: 192.168.1.1/24
                 -> v4: 100.70.4.18/28
 WAN (VMX1)
  0) Logout
                                           7) Ping host
  1) Assign interfaces
2) Set interface IP address
                                           8) Shell
                                          9) pfTop
                                          10) Firewall log
  3) Reset the root password
 4) Reset to factory defaults
                                          11) Reload all services
  5) Power off system
                                          12) Update from console
 6) Reboot system
                                          13) Restore a backup
Enter an option:
```

Выбираем опцию 8 (Shell)

Вводим команду pfctl -d

Выходим из shell командой exit

```
root@OPNsense:~ # pfctl -d
pf disabled
root@OPNsense:~ # exit■
```
